

Do you need to know your business process?

Stereologic Discovery™ is an easy and flexible solution that provides automated discovery of business processes from existing applications

How it works

Discovery & Visualization

While users work with business applications, the related business processes are automatically extracted and visualized in the Business Process Editor. The revealed business processes can be simulated, validated and changed in real time.

Web 2.0 Collaboration

Multiple users can discover multiple business processes simultaneously while effectively communicating with each other in a Web 2.0 environment.

Performance Visibility

The embedded Dashboard displays performance information about all users and the processes they are working on in real time.

Documentation & Integration

The discovered business processes are published in standard documentation formats as well as exported into Microsoft® Visio® and IBM® WebSphere® Business Modeler for further improvement and transformation.

Benefits

- Dramatically reduces the cost, time and risk of process discovery and documentation
- Extracts, maps and visualizes “AS-IS” processes in real time
- Eliminates multiple discussions and miscommunications that are disruptive to the business
- Improves documentation accuracy and removes rework
- Visualizes process performance and provides benchmarking
- Enables communication and teamwork in a globally distributed environment
- Easy to get started with and to use
- Front end for BPM and SOA

“The Stereologic solution provides an incredible value for the practical implementation of SOA at financial institutions. It reveals the actual business processes that utilize the SOA services, providing both process visualization and usage intelligence. In turn, this will allow a financial institution to optimize these services and make them truly effective as part of real business processes.”

Mark Eisner

Co-chair OMG Finance Domain Taskforce
